

Test Result for Namita

Total Questions : 0

[<< back to home](#)

Total Correct Answer : 0

Passing Percentage : 70%

Your Percentage : 0.00%

Result :

Fail

Wrong Answers :

Actual Answers :

1. A developer uses a before insert trigger on the Lead object to fetch the Territory__c object, where the Territory__c.PostalCode__c matches the Lead.PostalCode. The code fails when the developer uses the Apex Data Loader to insert 10,000 Lead records. The developer has the following code block:
01 for(Lead l : Trigger.new){ 02 if(l.PostalCode != null){ 03 List TerrList = [select Id FROM Territory__c WHERE PostalCode__c =: l.PostalCode]; 04 if(terrList.size() >0){ 05 l.Territory__c = terrList[0].Id; 06 } 07 } 08 } Which line of code is causing the code block to fail?
 - o The Lead in a before insert Trigger cannot be updated
 - o A NullPointerException is thrown if PostalCode is null
 - o **A SOQL query is located inside of the for loop code.**
 - o Trigger.new is not valid in a before insert Trigger.
2. Which of the following is an accurate statement about sharing keyword?
 - o Inner classes inherit the sharing setting from the container class
 - o **Inner classes do not inherit the sharing setting from the container class**
 - o **Both inner and outer classes can be declared as with sharing**
 - o Either inner or outer classes can be declared with sharing, but not both
 - o Classes doesn't inherit this setting from a parent class when one class extends or implements another.
3. Which component is available for you to deploy using the Metadata API?
 - o Console Layout
 - o **Case Layout**
 - o **Account Layout**
 - o Case Feed Layout
 - o Service Console Layout
4. What will automatically obey the organization-wide defaults and sharing settings for the user, who executes the code in the salesforce organization?
 - o **Apex Triggers**
 - o HTTP Callouts
 - o Apex Controllers
 - o **Anonymous Blocks**
 - o Page Layouts
5. What can be done to resolve the failures and reduce the number of code changes needed for future validation rules?
 - o Create a method that queries for valid Account records, and call this method from within test

- methods.
 - o Create a method that performs a callout for a valid Account record, and call this method from within test methods
 - o **Create a method that loads valid Account records from a Static Resource, and call this method within test methods**
 - o **Create a method that creates valid Account records, and call this method from within test methods**
6. Which requirement needs to be implemented by using standard workflow instead of Process Builder?
- o Submit a contract for approval
 - o Copy an account address to its contacts
 - o **Create activities at multiple intervals**
 - o **Send an outbound message without Apex code**
 - o Post Update to Chatter
7. A developer creates a Workflow Rule declaratively that updates a field on an object. An Apex update trigger exists for that object. What happens when a user updates a record?
- o **The Apex Trigger is fired more than once.**
 - o Both the Apex Trigger and Workflow Rule are fired only once.
 - o The Workflow Rule is fired more than once.
 - o No changes are made to the data.
8. A developer creates a new Visualforce page and Apex extension, and writes test classes that exercise 95% coverage of the new Apex extension. Change set deployment to production fails with the test coverage warning: "Average test coverage across all Apex classes and triggers is 74%, at least 75% test coverage is required." What can the developer do to successfully deploy the new Visualforce page and extension?
- o Select "Fast Deployment" to bypass running all the tests
 - o Create test classes to exercise the Visualforce page markup
 - o Select "Disable Parallel Apex Testing" to run all the tests.
 - o **Add test methods to existing test classes from previous deployments**
9. A company that uses a custom object to track candidates would like to send candidate information automatically to a third-party human resources system when a candidate is hired. What can a developer do to accomplish this task?
- o Create an escalation rule to the hiring manager
 - o **Create a workflow rule with an outbound message action.**
 - o Create a Process Builder with an outbound message action
 - o Create an auto-response rule to the candidate
10. What is a capability of cross-object formula fields?
- o **Formula fields can reference fields from objects that are up to 10 relationships away.**
 - o Formula fields can be used in three roll-up summaries per object.
 - o Formula fields can reference fields in a collection of records from a child relationship.
 - o **Formula fields can reference fields from master-detail or lookup parent relationships.**
 - o **Formula fields can expose data the user does not have access to in a record.**
11. What is the minimum log level needed to see user-generated debug statements?
- o FINE
 - o INFO
 - o **DEBUG**
 - o WARN

12. **Why would a developer use `Test.startTest()` and `Test.stopTest()`?**
- o To indicate test code so that it does not impact Apex line count governor limits
 - o To avoid Apex code coverage requirements for the code between these lines.
 - o **To create an additional set of governor limits during the execution of a single test class**
 - o To start and stop anonymous block execution when executing anonymous Apex code
13. **Which standard field needs to be populated when a developer inserts a new contact records programmatically?**
- o Name
 - o **LastName**
 - o AccountId
 - o Account Name
14. **How can a developer avoid exceeding governor limits when using an Apex Trigger?**
- o **By performing DML transactions on lists of sObjects**
 - o **By using Maps to hold data from query results**
 - o By using a helper class that can be invoked from multiple triggers
 - o By using the database class to handle DML transactions
15. **A candidate may apply for multiple jobs at the company Universal Containers by submitting a single application per job posting. Once an application is submitted for a job posting, that application cannot be modified to be resubmitted to a different job posting. What can the administrator do to associate an application with each job posting in the schema for the organization?**
- o Create a master-detail relationship in the Job Postings custom object to the Applications custom object
 - o Create a lookup relationship on both objects to a junction object called Job Posting Applications
 - o Create a lookup relationship in the Applications custom object to the Job Postings custom object
 - o **Create a master-detail relationship in the Application Custom object to the Job Postings custom object**
16. **What is a correct pattern to follow when programming in Apex on a multi-tenant platform?**
- o Apex code is created in a separate environment from schema to reduce deployment errors.
 - o Apex classes use the "with sharing" keyword to prevent access from other server tenants.
 - o DML is performed on one record at a time to avoid possible data concurrency issues.
 - o **Queries select the fewest fields and records possible to avoid exceeding governor limits.**
17. **What would a developer do to update a picklist field on related Opportunity records when a modification to the associated Account record is detected?**
- o Create a visualforce page
 - o Create a workflow rule with field update
 - o Create a lightning component
 - o **Create a process with Process Builder**
18. **What is true of a partial sandbox that is not true of a full sandbox?**
- o **More frequent refreshes**
 - o Only includes necessary metadata
 - o **Limited to 5GB of data**
 - o Use of change sets

19. When loading data into an organization, what can a developer do to match records to update existing records?
- o Match an auto-generated Number field to a column in the imported file
 - o **Match the Id field to a column in the imported file**
 - o **Match an external Id Text field to a column in the imported file**
 - o Match the Name field to a column in the imported file
20. In an organization that has enabled multiple currencies, a developer needs to aggregate the sum of the Estimated_value__c currency field from the CampaignMember object using a roll-up summary field called Total_estimated_value__c on Campaign. How is the currency of the Total_estimated_value__c roll-up summary field determined?
- o The values in CampaignMember.Estimated_value__c are summed up and the resulting Total_estimated_value__c field is displayed as a numeric field on the Campaign record.
 - o **The values in CampaignMember.Estimated_value__c are converted into the currency of the Campaign record, and the sum is displayed using the currency on the Campaign record.**
 - o The values in CampaignMember.Estimated_value__c are converted into the currency on majority of the CampaignMember records and the sum is displayed using that currency.
 - o The values in CampaignMember.Estimated_value__c are converted into the currency of the current user, and the sum is displayed using the currency on the Campaign record.
21. Which data structure is returned to a developer when performing a SOSL search?
- o A map of sObject Types to a list of lists of sObjects
 - o **A list of list of sObjects.**
 - o A list of sObjects
 - o A map of sObject types to a list of sObjects
22. A company has a custom object named Warehouse. Each Warehouse record has a distinct record owner, and is related to a parent Account in Salesforce. Which kind of relationship would a developer use to relate the Account to Warehouse?
- o Parent-Child
 - o **Lookup**
 - o One-to-Many
 - o Master-Detail
23. What must the Controller for a Visualforce page utilize to override the standard Opportunity view button?
- o **The Opportunity StandardController for pre-built functionality.**
 - o A callback constructor to reference the Standard Controller
 - o A constructor that initializes a private Opportunity variable.
 - o The standardSetController to support related lists for pagination.
24. What is the preferred way to reference web content, such as images, stylesheets, JavaScript, and other libraries, that is used in Visualforce pages?
- o By uploading the content to the documents tab
 - o **By uploading the content as a Static Resource**
 - o By accessing the content from a third-party CDN
 - o By accessing the content from Chatter files
25. What is a characteristic of the Lightning Component framework?
- o It uses XML as its data format.
 - o **It has an event-driven architecture.**
 - o It works with existing Visualforce pages.

- It includes responsive components.
26. What should a developer working in a sandbox use to exercise a new test class before the developer deploys that test class to production?
- The Run Tests page in Salesforce Setup
 - The Apex Test Execution page in Salesforce Setup
 - The Test menu in the Developer Console
 - The REST API and ApexTestRun method
27. How can a developer refer to, or instantiate a PageReference in Apex?
- By using the Page object and a visualforce page name
 - By using a pageReference with a partial or full URL
 - By using the PageReference.page() method with a partial or full URL
 - By using the ApexPages.Page() method with a visualforce page name
28. A developer created an Apex trigger using the Developer Console and now wants to debug code. How can the developer accomplish this in the Developer Console?
- Add the user name to the Log Inspector
 - Open the Progress tab in the Developer Console
 - Select the Override Log Triggers checkbox for the trigger
 - Open the Logs tab in the Developer Console
29. In the code below, what type does Boolean inherit from? Boolean b = true;
- Class
 - Object
 - Enum
 - String
30. In which order does Salesforce execute events upon saving a record?
- Before Triggers; Validation Rules; After Triggers; Workflow Rules; Assignment Rules; Commit
 - Validation Rules; Before Triggers; After Triggers; Assignment Rules; Workflow Rules; Commit
 - Before Triggers; Validation Rules; After Triggers; Assignment Rules; Workflow Rules; Commit
 - Validation Rules; Before Triggers; After Triggers; Workflow Rules; Assignment Rules; Commit
31. A reviewer is required to enter a reason in the comments field only when a candidate is recommended to be hired. Which action can a developer take to enforce this requirement?
- Create a validation rule
 - Create a required Visualforce component
 - Create a formula field
 - Create a required comments field
32. Which type of information is provided by the Checkpoints tab in the Developer console?
- Namespace
 - Time
 - Exception
 - Debug Statement
33. In a single record, a user selects multiple values from a multi-select picklist. How are the selected values represented in Apex?
- As a String with each value separated by a semicolon

- As a Set with each value as an element in the set
 - As a String with each value separated by a comma
 - As a List with each value as an element in the list Previous
34. A developer wants to display all the available record types for a case Object. The developer also wants to display the picklist values for the Case.Status field. The Case Object and the Case.Status field are on a Custom Visualforce page. Which action can the developer perform to get the record types and picklist values in the controller?
- Use Schema.RecordTypeInfo returned by Case.sObjectType.getDescribe().getRecordTypeInfos()
 - Use Schema.PicklistEntry returned by Case.Status.getDescribe().getPicklistValues()
 - Use SOQL to query Case records in the org to get all the RecordType values available for Case
 - Use SOQL to query Case records in the org to get all values for the Status picklist field
35. A developer is creating an application to track engines and their parts. An individual part can be used in different types of engines. What data model should be used to track the data and to prevent orphan records?
- Create a lookup relationship to represent how each part relates to the parent engine object
 - Create a junction object to relate many engines to many parts through a master-detail relationship
 - Create a master-detail relationship to represent the one-to-many model of engines to parts
 - Create a junction object to relate many engines to many parts through a lookup relationship
36. How would a developer determine if a CustomObject__c record has been manually shared with the current user in Apex?
- By calling the profile settings of the current user
 - By querying CustomObject__share
 - By calling the isShared() method for the record
 - By querying the role hierarchy
37. What can a developer do to match records to update existing records when loading data into an organization?
- Match an auto-generated Number field to a column in the imported file
 - Match the Id field to a column in the imported file
 - Match the Name field to a column in the imported file
 - Match an external Id Text field to a column in the imported file
38. What is the proper process for an Apex unit test?
- Create data for testing. Execute runAllTests(). Verify that the results are correct.
 - Query for test data using SeeAllData= true. Execute runAllTests(). Verify that the results are correct.
 - Query for test data using SeeAllData= true. Call the method being tested. Verify that the results are correct.
 - Create data for testing. Call the method being tested. Verify that the results are correct.
39. What is the benefit of the Lightning Component Framework?
- Better performance for custom Salesforce1 Mobile apps
 - More pre-built components to replicate the Salesforce look and feel
 - Better integration with Force.com sites.
 - More centralized control via server-side logic
40. The Sales Management team hires a new intern. The intern is not allowed to view Opportunities, but

needs to see the Most Recent Closed Date of all child Opportunities when viewing an Account record. What would a developer do to meet this requirement?

- Create a formula field on the Account object that performs a MAX on the Opportunity Close Date field
- Create a Workflow Rule on the Opportunity object that updates a field on the parent Account
- Create a trigger on the Account object that queries the Close Date of the most recent Opportunities
- **Create a roll-up summary field on the Account object that performs a MAX on the Opportunity Close Date field**

41. Which resource can be used to fire events in the Lightning Component framework?

- Visualforce controller actions
- Third-party web service code
- **Javascript controller actions**
- **Third-party Javascript code**

42. A developer creates an Apex helper class to handle complex trigger logic. How can the helper class warn users when the trigger exceeds DML governor limits?

- By using Messaging.SendEmail() to continue the transaction and send an alert to the user after the number of DML statements exceed.
- By using ApexMessage.Message() to display an error message after the number of DML statements exceed.
- **By using Limits.getDMLRows() and then displaying an error message before the number of DML statements exceed.**
- By using PageReference.setRedirect() to redirect the user to a custom Visualforce page before the number of DML statements exceed.

43. A developer needs to provide a Visualforce page that lets users enter Product specific details during a Sales cycle. How can this be accomplished?

- Download an Unmanaged Package from the AppExchange that provides a custom Visualforce page to modify
- **Create a new Visualforce page and an Apex controller to provide data entry**
- Download a Managed Package from the AppExchange that provides a custom Visualforce page to modify
- **Copy the standard page and then make a new Visualforce page for Product data entry**

44. What is a valid source and destination pair that can send or receive change sets?

- Developer Edition to production
- **Sandbox to sandbox**
- Developer edition to sandbox
- **Sandbox to production**

45. Which statement about change set deployments is accurate?

- **They can be used only between related organizations.**
- **They can be used to deploy custom settings data.**
- They can be used to transfer Contact records.
- They use an all or none deployment model.
- **They require a deployment connection**

46. Which statement would a developer use when creating test data for products and pricebooks?

- Pricebook pb = new pricebook()
- IsTest(SeeAllData=false)
- **Id pricebookId = Test.getStandardPricebookId();**

- List objList= Test.loadData(Acccount.sObjectType, 'myResource');

47. **Where would a developer build a managed package?**

- Developer Sandbox
- **Developer Edition**
- Partial Copy Sandbox
- Unlimited Edition

48. **What is a capability of a StandardSetController?**

- It enforces field-level security when reading large record sets.
- **It allows pages to perform mass updates of records.**
- It extends the functionality of a standard or custom controller.
- **It allows pages to perform pagination with large record sets.**

49. **Which user can edit a record after it has been locked for approval?**

- **An administrator**
- **A user who is assigned as the current approver**
- Any user who approved the record previously
- Any user with a higher role in the hierarchy

50. **What is a capability of formula fields?**

- Display the previous value for a field using the PRIORVALUE function
- **Determine if a datetime field has passed using the NOW function**
- **Generate a link using the HIPERLINK function to a specific record in a legacy system**
- Return and display a field value from another object using the VLOOKUP function
- **Determine which of three different images to display using IF function**

51. **Which trigger event allows a developer to update fields in the Trigger.new list without using an additional DML statement?**

- **Before insert**
- After update
- **Before update**
- After insert

52. **Which type of code represents the Controller in MVC architecture on the Force.com platform?**

- A static resource that contains CSS and images
- **Custom Apex and Javascript code that is used to manipulate data**
- **Javascript that is used to make a menu item display itself**
- StandardController system methods that are referenced by Visualforce Previous

53. **A visualforce page has a standard controller for an object that has a lookup relationship to a parent object. How can a developer display data from the parent record on the page?**

- By using a roll-up formula field on the child record to include data from the parent record
- **By using merge field syntax to retrieve data from the parent record**
- By using SOQL on the Visualforce page to query for data from the parent record
- By adding a second standard controller to the page for the parent record

54. **A company wants a recruiting app that models candidates and interviews; displays the total number of interviews on each candidate record; and defines security on interview records that is independent from the security on candidate records. What would a developer do to accomplish this task?**

- Create a roll-up summary field on the Candidate object that counts Interview records
 - **Create a trigger on the Interview object that updates a field on the Candidate object**
 - Create a master-detail relationship between the Candidate and Interview objects
 - **Create a lookup relationship between the Candidate and Interview objects**
55. Which action can a developer perform before update trigger?
- **Display a custom error message in the application interface**
 - **Change field values using the Trigger.new context variable**
 - Update the original object using an update DML operation
 - Delete the original object using a delete DML operation
56. Which data type or collection of data types can SOQL statements populate or evaluate to?
- A Boolean
 - **An Integer**
 - A string
 - **A single sObject**
 - **A list of sObjects**
57. A developer needs to ensure there is sufficient test coverage for an Apex method that interacts with Accounts. The developer needs to create test data. What is the preferred way to load this test data into Salesforce?
- By using Documents
 - **By using Static Resources**
 - By using HttpCalloutMocks
 - By using WebServiceTests
58. A developer writes a SOQL query to find child records for a specific parent. How many levels can be returned in a single query?
- 5
 - 3
 - 7
 - **1**
59. A developer has the following code: `try { List <String> nameList; Account a; String s = a.Name; nameList.add (s); } catch (ListException le) {System.debug ('List Exception');} catch (NullPointerException npe){System.debug('Null Pointer Exception');} catch (Exception e) {System.debug ('Generic Exception');}` What would be output of this code?
- **Null Pointer Exception**
 - List Exception
 - Generic Exception
 - None
60. What is the capability of the Force.com IDE?
- **Run Apex Tests**
 - **Edit Metadata components**
 - Roll Back Deployments
 - Download debug logs

Test Result for Namita

Total Questions : 0

[<< back to home](#)

Total Correct Answer : 0

Passing Percentage : 70%

Your Percentage : 0.00%

Result :

Fail

Wrong Answers :

Actual Answers :

1. What is Lazy Loading?

- o A technique that helps improve performance when loading large amounts of data in Salesforce
- o When a user loads all of the components at once
- o **A technique in which the users load the first primary components and then load the other non-essential components in the same page**
- o When a user pre-loads all of the secondary components to help improve performance

2. Which is non-deterministic in a SOQL query?

- o A field that references a pick list
- o **A field that uses TODAY()**
- o **A field that references a text field on the parent object**
- o A field that references both a number and text value

3. Which method is better for searching across multiple objects?

- o **SOSL**
- o Reports
- o SOQL
- o Global Search

4. How can a developer troubleshoot a long-running code block?

- o **Use debug logs, the Developer Console, and Workbench**
- o **Use the Execution Stack in the Execution Overview**
- o Use your browser's developer tools
- o Perform a load test on the application code

5. What is return type of a query that uses count() in the SELECT statement?

- o **AggregateResult**
- o Map
- o List
- o Set

6. What parameters can you use with @invocableMethod?

- o A map of typed sObjects
- o A generic sObject
- o **A list of typed sObjects**
- o **A list of user-defined type**

7. In terms of limits, which of the following does the 'continuation' keyword help?

- ROW LOCK error
- **Callout time**
- Concurrent requests
- Visualforce load times

8. What is the default timeout for callouts?

- **10 Seconds**
- There is no timeout
- 20 Seconds
- 120 Seconds

9. Which tab can help in debugging SOQL warnings?

- **Limits**
- Save Order
- Timeline
- Executed Units

10. How can you use compound fields in development?

- In the WHERE clause of SOQL query
- In Visualforce markup
- In a lookup field
- **As a read-only field in Apex code**

11. How can a developer update the standard currency in an org using API, when Multicurrency is enabled?

- **SOAP API**
- Tooling API
- Metadata API
- Rest API

12. What is the Fuel API?

- **An app that can be integrated with ExactTarget and extends our native features and capabilities**
- A force.com App
- An app that third party companies can use to spam the user's inbox
- An app that supports one open language

13. Which of the following test methods would return one contact record for the @isTest class?

- **"@isTest(seeAlldata=false) Public void test_method(){ Contact C = [SELECT id,name FROM Contact LIMIT 1]; "**
- "@isTest(seeAlldata=false) Public void test_method(){ Contact C = [SELECT id,name FROM Contact]; "
- "@isTest(seeAlldata=false) Public void test_method(){ Contact C = [SELECT id,name FROM Contact LIMIT 10];"
- "@isTest(seeAlldata=false) Public void test_method(){ Contact C = [SELECT id,name FROM Contact LIMIT 100]; "

14. An org has Multi-Currency enabled, and the default currency is British Pounds. A developer wants to return a list of accounts where the Annual Revenue is equal to 200USD. What is the correct query

to use?

- **SELECT Id, convertCurrency(AnnualRevenue) FROM Account WHERE AnnualRevenue = USD200**
- SELECT Id, AnnualRevenue FROM Account WHERE AnnualRevenue = USD200
- SELECT Id FROM Account WHERE AnnualRevenue = USD200
- SELECT Id,Rev FROM Account WHERE AnnualRevenue = USD200

15. What is the one way to avoid ROW LOCK errors when working with large datasets?

- Use Developer Console
- **Process the job in serial mode**
- Update Sharing Rules using integration
- Perform updates on the roll-up summary fields and the related records on the object

16. What methods can be used to test Webservices?

- RestCalloutMock
- **WebServiceMock**
- SoapCalloutMock
- **Test.setMock**

17. How can you access permission sets in Apex?

- Use AssigneeId.GetPermissionSetAssignments()
- Calling userId.GetPermissionSetAssignments()
- **A SOQL that uses AssigneeId as the filter**
- A SOQL that uses userId as the filter

18. A user wants to know the best way that they can update a field on edit without using custom code. What would be the best recommendation?

- Create a Validation Rule
- Use Auto-Response Rules to perform a field update
- **Use a workflow rule to perform a field update**
- Use Escalation rules to escalate the record, which will trigger a field update

19. Which is the best use case for a list custom setting?

- When specifying fields used frequently in reports
- When specifying profile-wide access
- **When specifying static org-wide data for frequent use**
- When specifying user-specific access

20. How can a developer troubleshoot a long-running code block?

- Perform a load test on the application code
- Use your browser's developer tools
- **Use debug logs, the Developer Console and workbench**
- **Use the Execution Stack in the Execution Overview**

21. Which is the efficient way to update an Opportunity and its related Account using code?

- **Opportunity o = [SELECT account.name,Name from Opportunity where Name='ACME']; o.Stage = 'Closed Won'; o.account.Name = 'acme' update o; update o.account**
- Opportunity o = [SELECT account.name,Name from Opportunity where Name='ACME']; o.Stage = 'Closed Won'; o.account.Name = 'acme' update o;
- Opportunity o = [SELECT account.name,Name from Opportunity where Name='ACME']; o.Stage = 'Closed Won'; update o; update account.name
- Opportunity o = [SELECT account.name,Name from Opportunity where Name='ACME'];

o.Stage = 'Closed Won'; update o; update o.account.name = 'acme';

22. A developer would like display the total amount of all related Opportunities on the parent Account. What is the best way to achieve this?

- o Create a Roll-Up Summary field on the Accounts object to calculate the sum of the Amount field on all child Opportunities.
- o Create a Formula Field on Account
- o Create an apex trigger on Account and calculate the field value
- o Create a process on Account which will count the value

23. How can a developer use Javascript in a Lightning Component?

- o By using server-side code
- o By making API calls from client-side code
- o By using a component bundle that includes a helper
- o By creating a Visualforce page

24. Assuming that all pieces are coded correctly and there is no custom timeout specified, what is the result of testing a callout if said callout takes 1 minute to respond?

- o Success—Cumulative timeout is 120 seconds
- o Success—Default callout time is 60 seconds
- o Failure—Default timeout is 10 seconds
- o Failure—you cannot test callouts.

25. Which tool or method could be helpful in de-duplicating during an email process?

- o Fuel API
- o OutboundEmailHandler Interface
- o Email.massSend()
- o Workflow Rule

26. What must a developer consider when using the webservice keyword?

- o The keyword static must be added to the webservice.
- o The webservice can return a map or set type.
- o Methods defined with the webservice keyword cannot take certain elements as parameters.
- o All methods or variables in the class must be declared as global

27. What is the proper syntax that a developer should use within an HTTP class in order to define the URL of an HTTP request using Webservices?

- o Request.getEndpoint()
- o Request.getBody()
- o Request.setEndpoint(url)
- o Request.setMethod()

28. A developer is working to create a selective query that generates 5000 records and wants to limit the number of records per page. What can be added to the query to ensure that this happens?

- o Add LIMIT and OFFSET clauses to query
- o Add a sub-query with OFFSET and a parent query having a value of 1 or more in the LIMIT clause
- o Nothing needs to be added as the salesforce has a built-in logic that limits the number of records per page based upon performance
- o Add OFFSET as a sub-query in the WHERE clause with a parent query having LIMIT 1

29. What is the vertical axis named in the chart? `<apex:page controller="Account"> <apex:chart height="600" width="700" data="{data}"> <apex:axis type="Numeric" position="left" fields="data1" title="Top 10 Accounts" grid="true"/> <apex:axis type="Category" position="bottom" fields="name" title="Month of the Year"> </apex:axis> <apex:lineSeries axis="left" fill="true" xField="name" yField="data1" markerType="cross" markerSize="4" markerFill="#000000"/> </apex:Chart> </apex:Page>`
- o Month of the Year
 - o Data1
 - o **Top 10 Accounts**
 - o Name
30. Which tab can help in debugging long load times?
- o **Timeline**
 - o Save Order
 - o Limits
 - o Executed Units
31. Which of the following Visualforce tags cannot be used with Javascript?
- o **Apex:actionRemote**
 - o Apex:actionPoller
 - o Apex:actionFunction
 - o Apex:actionSupport
32. How can a developer authorize endpoints in Salesforce?
- o By creating an HTTP class that has the URL in the setEndpoint
 - o By creating a flow using the Cloud Flow Designer that contains the URL of the site
 - o By adding the IP address of the site on the User's profile
 - o **By whitelisting the endpoint in the Remote Site Settings**
33. Which data type is NOT valid for Apex?
- o Long
 - o Integer
 - o Object
 - o **CheckBox**
34. Which data type is valid for Apex?
- o **String**
 - o **Time**
 - o **Blob**
 - o Radio Button
 - o Check Box
35. What is use of Break keyword?
- o **Exist the entire loop**
 - o Break the loop for one cycle
 - o Break the Class execution
 - o Break the controller execution
36. Which type of loop is not supported in Apex?
- o Do while
 - o While

- o For
- o **Static loop**

37. What is use of @AuraEnabled annotation?

- o **Providing this annotation makes your methods available to your Lightning components**
- o Providing this annotation makes your methods private and restricted to that class
- o Providing this annotation makes your methods public and available to other classes
- o Providing this annotation makes your methods as test methods

38. What is use of @Future annotation?

- o **Methods with the future annotation are executed asynchronously**
- o Methods with the future annotation are executed synchronously
- o Methods with the future annotation are exposed to other classes
- o Methods with the future annotation are private

39. What is valid for @Future annotation?

- o **Methods with the future annotation must be static methods, and can only return a void type**
- o Methods with the future annotation must be static methods, and can only return a list type
- o Methods with the future annotation must be list methods, and can only return a list type
- o Methods with the future annotation must be list methods, and can only return a void type

40. What is use of @isTest annotation?

- o **To define a test method**
- o To define static method
- o To define dynamic method
- o To define global method

41. What is use of @RemoteAction annotation?

- o **JavaScript remoting**
- o .Net Remoting
- o Third party remoting
- o Server side remoting

42. What is use of Visualforce Page?

- o **Build wizards and other multistep processes**
- o **Create your own custom flow control through an application**
- o **Define navigation patterns and data-specific rules for optimal, efficient application interaction**
- o Create Web services
- o Create email services

43. What is use of Apex?

- o **Create Web services**
- o **Create email services**
- o **Perform complex validation over multiple objects**
- o Build wizards and other multistep processes
- o Create your own custom flow control through an application

44. What is use of Apex?

45. How can we add Pagination in Visualforce page?
- o **Next and previous actions**
 - o List Controller
 - o Standard Controller
 - o Page Controller
46. What is use of <apex:component> in Pages?
- o **To define Custom Component**
 - o To define Standard Component
 - o To define VF Page
 - o To define Standard Controller
47. What is use of <apex:page renderAs="pdf"> ?
- o **To generate PDF of Visualforce page**
 - o To Show or Create PDF Button
 - o To download Apex Book
 - o To download Apex Cook Book
48. Which of the following code can be used to access a static resource named customhelp in Visual force Page?
- o **<apex:page sidebar="false" showHeader="false" standardStylesheets="false" action="{!URLFOR(\$Resource.customhelp)}"> </apex:page>**
 - o <apex:page sidebar="false" showHeader="false" standardStylesheets="false" action="{!\$Resource.customhelp}"> </apex:page>
 - o <apex:page sidebar="false" showHeader="false" standardStylesheets="false" action="{!\$customhelp}"> </apex:page>
 - o <apex:page sidebar="false" showHeader="false" standardStylesheets="false" action="{!\$URL.customhelp}"> </apex:page>
49. Which of the following options can be used to get the Component ID of a form named "theForm" in VF Page?
- o **\$Component.theForm**
 - o document.getelementbyId("theForm")
 - o document.getelementbyname("theForm")
 - o Page.theForm
50. What would following line of code do? List<Account> aa = [SELECT Id, Name FROM Account WHERE Name = 'Acme'];
- o **Retrieve a list of accounts that are named Acme**
 - o Retrieve an account named Acme
 - o Create an Account record named "Acme"
 - o Create a list of Account
51. What would following line of code do? List<List<SObject>> searchList = [FIND 'map*' IN ALL FIELDS RETURNING Account (Id, Name), Contact, Opportunity, Lead];
- o Return a list of accounts and opportunities that begin with the phrase map
 - o **Return a list of accounts, contacts, opportunities, and leads that begin with the phrase map**
 - o Return a list of accounts and leads that begin with the phrase map
 - o Return a list of accounts and contact that begin with the phrase map

52. **What are the different ways to invoke Apex?**
- By running Workflow rules
 - **By running Apex Email Service to process inbound email**
 - **A trigger invoked for specified events**
 - **A code snippet in an anonymous block**
 - By running Validation rules
53. **How we can invoke Apex?**
- By running Escalation Rules
 - By running Assignment Rules
 - **By running Visualforce controllers, which contain logic in Apex for Visualforce pages**
 - **By running Asynchronous Apex executing a future method**
54. **Which kind of collections are available in Apex?**
- ArrayCollection
 - **Sets**
 - **Maps**
 - ArrayList
 - **Lists**
55. **What are the ways to deploy Apex?**
- Create Classes in Prod
 - **Force.com IDE**
 - **Change Sets**
 - Deploy using static resources
56. **How we can deploy Apex from Sandbox to Prod?**
57. **How many Kind of APIS are available in Salesforce?**
- **SOAP API**
 - **REST API**
 - **Meta Data API**
 - Chunk API
 - Transient API
58. **Which kind of operation is NOT supported by Salesforce?**
- Insert
 - Update
 - Delete
 - **Validate**
59. **What is the best way to validate data using declarative approach?**
- **Validation Rules**
 - Apex Trigger
 - Workflow
 - Process Builder
60. **Which field type is not available in Salesforce Objects?**
- **Radio Buttons**
 - Text
 - Text Area

- Number

61. What is the use of Login IP Range?

- **Login IP is used to restrict user from logging in Salesforce**
- Login IP is present on Security Settings
- Login IP is a VPN range, which is used to verify that user has logged in from company network, and it doesn't restrict user from login
- Login IP is present on User Record

Test Result for Namita

Total Questions : 0

[<< back to home](#)

Total Correct Answer : 0

Passing Percentage : 70%

Your Percentage : 0.00%

Result :

Fail

Wrong Answers :

Actual Answers :

1. A developer has the following query: [SELECT Id, Firstname, LastName email FROM contact WHERE Lastname = 'Smith']. What does the query return, if there is no Contact with the last name 'Smith'?
 - o A Contact with Empty values
 - o A Contact Initialized to null
 - o **An error that no row found**
 - o An Empty list of Contact
2. What is the correct way to describe how Model-View-Controller (MVC) architecture is implemented on the Salesforce platform?
 - o Model : Schema Builder; View : List Views ; Controller : Setup Console
 - o **Model: Standard and Custom Objects ; View : VF Pages ; Controller : Apex Code**
 - o Model : Standard and Custom Objects ; View : VF Pages ; Controller : sControls
 - o Model : Apex Code ; View : List Views ; Controller : Setup Console
3. How can a developer determine, from the DescribeObjectResult, if the current user will be able to create records for an object in Apex?
 - o By using the isInsertable() method
 - o **By using the isCreatable() method**
 - o By using hasAccess() method
 - o By using the canCreateMethod
4. When can a developer use a custom Visualforce page in a Force.com application?
 - o **To generate PDF document with Application data**
 - o **To create components for Dashboard and Layouts**
 - o To deploy components between two organizations
 - o To modify the Page layout settings for a custom object
5. Which statement should a developer avoid using inside procedural loops?
 - o **Update contactlist**
 - o if(o.accountid==a.id)
 - o **List<Contact> contact = [Select id,salutation,firstname,email from Contact where accountid=:a.id];**
 - o System.debug('Amount of CPU time (in ms) used so far : ' + Limits.getCpuTime());
6. In the Lightning Component framework, where is client-side controller logic contained?

- HTML
 - Visualforce
 - Apex Code
 - **JavaScript**
7. A developer creates an Apex class that includes private methods. What can the developer do to ensure that the private methods can be accessed by the test class?
- Add the SeeAllData attribute to the test methods
 - **Add the TestVisible attribute to the Apex Methods**
 - Add the TestVisible attribute to the Apex Class
 - Add the SeeAllData attribute to the test class
8. Which Apex collection is used to ensure all values are unique?
- **Set**
 - List
 - Enum
 - An Object
9. How should a developer retrieve a record by using an ID that is passed on the URL on a visualforce page with a custom controller?
- Use the tag in the visualforce page
 - **Create a new PageReference object with the id**
 - Use the \$Action.View method in the Visualforce page
 - Use the constructor method for the controller.
10. What is the easiest way to verify a user before showing them sensitive content?
- Sending the user a SMS message with a Passcode
 - Calling the Session.forcedLoginUrl method in apex
 - **Calling the generateVerificationUrl method in apex**
 - Sending the user an Email message with a passcode
11. Identify the primitive data type in Apex to which a currency field is automatically assigned.
- **Decimal**
 - Double
 - Integer
 - Currency
12. How would a developer use Schema Builder to delete a custom field from the Account object that was required for prototyping but is no longer needed?
- Remove all the references in the code and then the field will be removed from Schema Builder
 - **Delete the field from Schema Builder and then all references in the code will be removed**
 - Remove all references from the code and then delete the custom field from Schema Builder
 - Mark the field for deletion in Schema Builder and then delete it from the declarative UI.
13. What would a developer do to update a picklist field on related Opportunity records when a modification to the associated Account record is detected?
- **Create a process with Process Builder**
 - **Create complex business processes that are not supported by workflow**
 - Create a workflow rule with a field update
 - **Create logic that occurs over the entire transaction, not just with a single record or object**
 - Create a Visualforce page
 - **Attach custom logic to another operation, such as saving a record**

- Create a Lightning Component
 - Define navigation patterns and data-specific rules for optimal, efficient application interaction
 - Create your own custom flow control through an application.
14. How many times 'str' is added to the list? `List<String> strLst = new List<String>(); for(Integer i=0;i<99;i++) { strLst.add('str'+i); } strLst.add('str'+100);`
- 100
 - 101
 - 99
 - 0
15. Which of the following is a valid way of loading external Javascript files into a VisualForce page?
- Using an <apex:define> tag
 - Using a <Link> tag
 - Using a <Script> tag
 - Using <apex:includscript> tag
16. Which declarative method helps ensure quality data?
- Workflow alerts
 - Validation rules
 - Lookup filters
 - Exception handling
 - Page layouts
17. When creating a record with quick action, what is the easiest way to post a feed item?
- By selecting create case feed on the quick action
 - By adding a workflow rule on the new record
 - By adding a trigger on the new record
 - By selecting create case feed on the new record
18. The Sales Management team requires that the Lead Source field of the Lead record be populated when a Lead is converted. What would a developer use to ensure that a user populates the LeadSource field prior to converting to a Lead?
- Process builder
 - Workflow
 - Formula Field
 - Validation rule
19. Which resource can be included in a Lightning Componentbundle?
- Javascript
 - Apex Class
 - Documentation
 - Adobe Flash
20. What action types should be configured to display a custom success message?
- Update a record
 - Delete a record
 - Post a feed item
 - Close a case
21. Which URL should be appended to server address to create a new VisualForce page HelloWorld in

developer mode?

- o /HelloWorld
- o /vf/HelloWorld
- o **/apex/HelloWorld**
- o /home/HelloWorld

22. What is an accurate statement about variable scope?

- o A static variable can restrict the scope to the current block if its value is null
- o Sub-blocks can reuse a parent's block variable name if its value is null
- o **Parallel blocks can use the same variable name**
- o **Sub-blocks cannot reuse a parent block's variable name**
- o **A variable can be defined at any point in a block**

23. Which statement is accurate, when creating unit tests in Apex?

- o Increased test coverage requires large test classes with many lines of code in one method
- o Triggers do not require any unit tests in order to deploy them from sandbox to production
- o **System Assert statements that do not increase code coverage contribute important feedback in unit**
- o Unit tests with multiple methods result in all methods failing every time one method fails

24. A developer needs to automatically populate the ReportsTo field in a Contact record, based on the values of the related Account and Department fields in the Contact record. Which type of trigger would the developer create?

- o After insert
- o **Before update**
- o After update
- o **Before insert**

25. Where can custom roll-up summary fields be created using Standard Object relationships?

- o **On Account using Opportunity records**
- o **On Opportunity using Opportunity Product records**
- o On Quote using Order records
- o On Account using Case records
- o **On Campaign using Campaign Member records**

26. Which of the following is NOT a valid return type of a custom formula?

- o Date
- o Decimal
- o Text
- o **Array**

27. Which of the following is a valid Apex statement?

- o Private static constant Double rate = 7.75;
- o **Account[] acctList = new List {new Account()};**
- o Map conMap = [SELECT Name FROM Contact];
- o Integer w,x,y=123, z='abc';

28. What are the supported content sources for custom button and links?

- o Static resources
- o Lightning Page
- o **URL**
- o **Visualforce Page**

- Chatter File

29. A customer has requested a user interface, where list view of four objects can be accessed together with frequent navigation across them. Which feature of Force.com platform can be used to support this requirement?
- **Console**
 - Dashboards
 - Packages
 - Layout template
30. Which scenario is invalid for execution by unit tests?
- **Loading the standard Pricebook ID using a system method**
 - Executing methods as different users
 - Executing methods for negative test scenarios
 - Loading test data in place of user input for Flows
31. When the value of a field in an account record is updated, which method will update the value of a custom field in all related opportunities?
- A cross-object formula field on the Account object.
 - **A process Builder on the Account object.**
 - **An Apex trigger on the Account object.**
 - A Workflow Rule on the Account object.
32. When would a developer use a custom controller instead of a controller extension?
- **When a Visualforce page should not enforce permissions or field-level security**
 - **When a Visualforce page needs to replace the functionality of a standard controller**
 - When a Visualforce page needs to add new actions to a standard controller
 - When a Visualforce page does not refer a single primary object
33. A developer wants to list all of the Tasks for each Account on the Account detail page. When a Task is created for a Contact, what does the developer need to do to display the Task on the related Account record?
- Nothing. The Task cannot be related to an Account and a Contact
 - Create a Workflow Rule to relate the Task to the Contact's Account
 - **Nothing. The Task is automatically displayed on the Account Page**
 - Create an Account formula field that displays the Task information
34. A developer wrote a workflow email alert on case creation so that an email is sent to the case owner manager when it is created. When should this email be sent?
- **After Committing to database**
 - Before committing to database
 - After Trigger execution
 - Before Trigger execution
35. What is the result when a Visualforce page calls an Apex controller, which calls another Apex class, which then results in hitting a governor limit?
- **Any changes up to the error are rolled back**
 - Any changes up to the error are saved
 - All changes before a savepoint are saved
 - All changes are saved in the first Apex Class

36. Which control statement should a developer use to implement a set of code that executes for every record in the recordset without performing a size() or .length() method call when the number of record in a recordset is unknown?
- o While (Condition) {...}
 - o Do {...} While (Condition)
 - o For (init_stmt; exit_condition; increment_stmt) {...}
 - o **For(Variable : list_or_set){...}**
37. What is a good practice for a developer to follow when writing a trigger?
- o Using synchronous callouts to call external systems
 - o **Using the Set data structure to ensure distinct records**
 - o Using @future methods to perform DML operations
 - o **Using the Map data structure to hold query results by ID**
38. Universal Recruiters will like to hire ten employees in two months. In a recruitment application, a dashboard component needs to be built that will display progress towards achieving this goal of hiring of ten employees. Which dashboard component can be used to implement this feature?
- o **Gauge**
 - o Metric
 - o Chart
 - o Visualforce Page
39. In a recruitment application, a dashboard component needs to be built that will display total number of positions. Which dashboard component can be used to implement this feature?
- o Gauge
 - o **Metric**
 - o Table
 - o Chart
40. A developer has a single custom controller class that works with a Visualforce to support creating and editing multiple sObjects. The wizard accepts data from user inputs across multiple Visualforce pages and from a parameter on the initial URL. Which statements is unnecessary inside the unit test for the custom controller?
- o Test.setCurrentPage(PageRef)
 - o Public ExtendedController(ApexPages.StandardController cntrl) {}
 - o **ApexPages.currentPage().getParameters().put('input','Testvalue')**
 - o String nextPage = controller.save().getUrl();
41. On which object can an administrator create a roll-up summary field?
- o Any object that is on the child side of a lookup relationship
 - o Any object that is on the parent side of a lookup relationship
 - o Any object that is on the detail side of a master-detail relationship
 - o **Any object that is on the master side of a master-detail relationship**
42. An organization needs to create a public website that displays data from Salesforce.com organization without user registration. Identify which one meets the above requirement.
- o Apex
 - o Triggers
 - o **Force.com Sites**
 - o Formula
43. An org has different Apex classes that provide Account-related functionality. After a new validation

rule is added to the Account object, many of the test methods fail. What can be done to resolve the failures and reduce the number of code changes needed for future validation rules?

- Create a method that queries for a valid Account records, and call this method from within test methods
- **Create a method that loads valid Account records from a Static Resource, and call this method within test methods**
- **Create a method that creates valid Account records, and call this method from within test methods**
- Create a method that performs a callout for a valid Account record, and call this method within test methods

44. A Hierarchy Custom Setting stores a specific URL for each profile in Salesforce. Which statement can a developer use to retrieve the correct URL for the current user's profile and display this on a Visualforce page?

- `{!$Setup.Url_Settings__c.Instance[Profile.Id].URL__c}`
- `{!$Setup.Url_Settings__c[Profile.Id].URL__c}`
- **`{!$Setup.Url_Settings__c.URL__c}`**
- `{!$Setup.Url_Settings__c[$Profile.Id].URL__c}`

45. Which code block returns the ListView of an Account object using the following debug statement?
System.debug(Controller.getListViewOptions());

- `ApexPages.StandardController controller = new ApexPages.StandardController(Database.getQueryLocator('select Id from Account Limit 1'));`
- `ApexPages.StandardSetController controller = new ApexPages.StandardSetController([SELECT Id FROM Account LIMIT 1]);`
- **`ApexPages.StandardSetController controller = new ApexPages.StandardSetController(Database.getQueryLocator('select Id from Account Limit 1'))`**
- `ApexPages.StandardController controller = new ApexPages.StandardController([SELECT Id FROM Account LIMIT 1]);`

46. Which code segment can be used to control when the `doWork()` method is called?

- `For(triggerIsRunning t : trigger.new){ doWork(); }`
- **`If(trigger.IsInsert){ doWork(); }`**
- `If(trigger.IsRunning){ doWork(); }`
- `For (trigger.IsInsert t : trigger.new){ doWork(); }`

47. Which of these is NOT a valid report type?

- Summary
- Matrix
- Tabular
- **Detailed**

48. What is a valid statement about apex classes and interfaces?

- **The default modifier for a class is private**
- A class can have multiple levels of inner class
- The default modifier for an interface is private
- **Exception classes must end with the word exception()**

49. A developer has the following trigger that fires after insert and creates a child Case, whenever a new Case is created: `List<Case> childCases = new List<Case>(); for(Case parent: Trigger.new){ Case child = new Case(ParentId = parent.Id, Subject =parent.Subject); childCases.add(child); } insert childCases;` What happens after the code block executes?

- **The trigger enters an infinite loop and eventually fails**
 - Multiple child cases are created for each parent case in Trigger.new
 - A child case is created for each parent case in Trigger.new
 - The trigger fails if the Subject field on the parent is blank
50. A developer runs the following anonymous code block: `List<Account> acc = [SELECT Id FROM Account LIMIT 10] Delete acc ; Database.emptyRecycleBin(acc); system.debug(Limits.getDMLStatements()+', '+Limits.getLimitDMLStatements());` What is the result?
- **2150**
 - 150,11
 - 150,2
 - 11150
51. A developer needs to know if all tests currently pass in a Salesforce environment. Which feature can the developer use?
- **Developer Console**
 - ANT Migration Tool
 - **Salesforce UI Apex Test Execution**
 - Workbench Metadata Retrieval
52. A custom exception named "RecordNotFoundException" is defined by the following code block: `public class RecordNotFoundException extends Exception { }` Which statement can a developer use to throw the custom exception?
- Throw RecordNotFoundException();
 - Throw RecordNotFoundException('Problem occurred')
 - **Throw new RecordNotFoundException('Problem occurred')**
 - **Throw new RecordNotFoundException();**
53. What is a capability of the Developer Console?
- **Execute Anonymous Apex Code, Create/Edit Code, View Debug Logs**
 - Execute Anonymous Apex Code, Run REST API, Deploy code changes
 - Execute Anonymous Apex Code, Create/Edit Code, Deploy code changes
 - Execute Anonymous Apex Code, Run REST API, Create/EDIT Code
54. A company that uses a custom object to track candidates would like to send candidate information automatically to a third-party human resources system when a candidate is hired. What can a developer do to accomplish this task?
- Create an auto response rule to the candidate
 - Create an escalation rule to the hiring manager
 - **Create a workflow rule with an outbound message action**
 - Create an escalation rule to the hiring manager
55. What is the most important consideration when developing in a multi-tenant environment?
- Polyglot persistence provides support for a global, multilingual user base in multiple orgs in multiple instances.
 - The unique domain names take the place of namespace for code developed for multiple orgs on multiple instances.
 - Org-wide data security determines whether other tenants can see data in multiple orgs on the same instance.
 - **Governor limits or prevents tenants from impacting performance in multiple orgs on the same instance**

56. Which of the following represent correct syntax to display first name from global variable user?

- o **{!\$User.FirstName}**
- o \$User.FirstName
- o {!User.FirstName}
- o {User.FirstName}

57. How do you invoke a Visualforce page to call a Flow?

- o **Use flow:interview**
- o Use flow.invoke
- o Call the Visualforce Page from the Flow
- o Reference the Flow as a static resource on the Visualforce page

58. An ORG has over 1 million contact records. Which SOQL query would you run in order to return a list of contacts named Steve?

- o Select Id, Name from Contact WHERE First name LIKE '%Steve'
- o SELECT Id, Name from Contact WHERE FirstName ON Steven
- o SELECT Id, Name from Contact WHERE FirstName != 'Steve'
- o **SELECT Id, Name From Contact WHERE FirstName = 'Steve'**

59. Which of the following are required for SOAP login() authentication?

- o **ORG ID**
- o Using Test methods
- o Using Developer Console
- o Session Id
- o **Force.com Migration Tool**
- o **Username & Password**
- o **SOAP API**
- o Security Token
- o **Force.com IDE**

60. Which tab can help in debugging SOQL warnings?

- o Executed Units
- o Save Order
- o **Limits**
- o Timeline
